INTRODUCTION

According to World Health Organisation Health is defined as "A State complete of physical, social and mental well-being and not and merely absence of disease or infirmity".

You may have heard the word 'health' used in day-to-day conversations. We all use it very often. Sometimes you may say, 'My grandfather is in good health' or you may use it to describe people, for example, 'my neighbor has a healthy attitude' or a 'healthy relationship'.

You must have heard the saying that 'a healthy population is the wealth of every nation'. Health is of primary concern to all individuals as well as the community at large. Good health requires certain efforts and cannot be purchased. In this unit, we will start our discussion by looking at the concept of health and its classification and discuss the characteristics of good health and the various factors that go into maintaining it. What is Hygiene refers to a set of practices adopted by a community that are associated with the Preservation of health and healthy living; your own cleanliness and that of those around you. You will also learn about the classification of hygiene.

In addition, we shall look at issues of environmental pollution, and the common causes of pollution in the community. Lastly, we shall identify common health issues in the community. In a nutshell, we can say that this unit addresses health, hygiene, and pollution, "holistically" from the point of view of the family and community. The unit will guide you on the range of actions that individuals can take to protect themselves from the effects of unhygienic and polluted environment.
